

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 25, 2019 – 0800 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (78 new fires)
New large incidents:	2
Large fires contained:	2
Uncontained large fires:***	5
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 6 large fires being managed under a strategy other than full suppression.

*** Uncontained large fires include only fires being managed under a full suppression strategy.

***Prescribed fire acres are for reference only and may not reflect the most up-to-date information.

***Official prescribed fire accomplishment reporting occurs through agency specific systems of record.

Predictive Services Discussion: The critical weather issue of the day remains the hot, dry conditions and local terrain-influenced winds in southern California. Offshore Santa Ana winds in will continue today but will not be quite as strong as yesterday. Winds will gust between 25 and 50 mph at times in Los Angeles and Ventura Counties, with the strongest winds occurring in the Los Angeles Mountains. These strong winds coincide with temperatures from the mid-80s to the mid-90s and relative humidity dropping to as low as 2 to 9 percent. Accordingly, Red Flag Warnings are in effect for these areas for hot, dry, and windy conditions today. Further north, the speed of the Diablo and Mono winds in northern California will be much reduced today compared to yesterday. Afternoon temperatures and humidity will also be less extreme in northern California than in the south.

Hypothermia

Firefighter Health & First Aid

Hypothermia occurs when your core body temperature falls below normal. It can easily happen in cold winds or wetness. Hypothermia can also occur in moderately cool temperatures, particularly if coupled with dehydration. People tend to forget to drink on cool, wet days and can get hypothermic even when the temperature stays well above freezing.

● Symptoms of hypothermia include:

- Slurred speech
- Weakness and loss of coordination
- Confusion
- Irrational behavior
- Uncontrollable shivering (although, at extremely low body temperatures, shivering may stop)
- Pale and cold skin
- Drowsiness – especially in more severe stages
- Slowed breathing or heart rate

Your body automatically begins to shiver to warm itself. As your energy is used up to keep warm, you may reach a point where your body will be unable to warm itself. If left untreated, your body will gradually shut down; and you can die.

● You can avoid hypothermia with the following precautions:

- Guard against dehydration.
- Avoid fatigue.
- Avoid cold winds.
- Take precautions, change out of wet clothes.
- Be aware of the symptoms and take action upon their onset.

● If you recognize hypothermia, take the following steps:

- Move the patient to shelter.
- Remove wet clothes and replace them with warm, dry garments.
- If the victim is alert, give them food and warm liquids to drink.
